Sheng Ma is a Master's student majoring in Computer Engineering; he received his Master's Degree from Northwestern University on December 15, 2018. His opt starts on Feb. 11. 2019, which means he is able to work immediately once he gets the offer.

He has adequate knowledge of HTML, CSS, and React on the front end and Java, and Go on the back end. Because of his knowledge of these techniques, he is familiar with constructing an app. One of his apps, NearBy, is built using React and Go, which can be used to create and view posts near where users live. Users are able to share pictures and videos and view others' through Google Map. These functions are supported by the application of ElasticSearch, Google Dataflow, BigTable and BigQuery.

I believe Sheng has a solid foundation of web skills and would do great at Indeed.
