2.21.2019

To Google Hiring team:

I am a Master's student, majoring in Computer Engineering, graduated from Northwestern University on Dec. 15th. 2018.

My opt starts on Feb. 11. 2019, which means I am able to work immediately once I get the offer.

I have good knowledge of HTML, CSS, and React on the front end and Java, and Go on the back end.

Because of this knowledge, I know how to build an app. One of my apps is built with React and Go, which can be used to

create and view posts near where user live. Users are able to share pictures and videos and view others' through Google

Map. These functions are supported by the application of ElasticSearch, Google Dataflow, BigTable and BigTable .

I believe I have a solid foundation and would do great at Google.

Sincerely,

Sheng Ma.
